```
public abstract class Document implements Cloneable {
    abstract void read();
    public Object clone() {
        Object clone = null;
        try {
            clone = super.clone();
        } catch (CloneNotSupportedException e) {
            e.printStackTrace();
        }
        return clone;
    }
}

public class Report extends Document {
    @Override
    void read() {
        System.out.println("im reading original file");
    }
}

public class Main {
    public static void main(String[] args) {
        new Main().go();
    }
    void go() {
        Report original = new Report();
        System.out.println("ORIGINAL ONE: ");
        original.read();
        System.out.println("CLONED ONE: ");
        Report clone = (Report) original.clone();
        clone.read();
    }
}
```
